# Integrated Community Engagement (ICE) Collaborative 

County Report:<br>Communities Served by<br>Midland Trail High School<br>Fall 2023

Fayette and Wyoming County, West Virginia

## Confidential

The ICE Collaborative 2019-2024 is funded by the Centers for Disease Control and Prevention via U48 Collaborative Agreement mechanisms to West Virginia Prevention Research Center within West Virginia University School of Public Health. The authors would like to extend our gratitude to the funder for its generous support. The contents of this report are the sole responsibility of Dr. Kristjansson and Dr. Mann, project Principal Investigators.

## Important

Thank you to the Fayette and Wyoming County School Districts and its schools for being partners committed to preventing substance use and abuse among young people in these counties. We appreciate all they have done to support data collection and to help families and community members learn more about what can be done to reduce risk and protect children and adolescents. Although your local school district and schools are playing a central role in this work, it is important to clearly state that this is not a school report, but a community report. The report's findings describe what families, communities, peers, and schools can do in partnership to help prevent substance use and abuse among young people. Schools alone are not responsible for any problems described in this report and cannot be solely or primarily responsible for providing the solutions. The findings of this report describe what is happening in the whole community and provides opportunities for the whole community to act together. That said, what your local school district and schools have done to help the community better understand how to prevent substance use and abuse among young people has been critically important. We appreciate their leadership and hard work, as well as their ongoing commitment to the project. We encourage all members of the community to join us in expressing gratitude for the essential contributions of your local school district and schools.

## Introduction

Preventing child and adolescent substance use and risks associated with school drop-out are critical to promote healthy development. A successful approach to such prevention is to work towards strengthening key protective factors and reducing risk factors that operate in the localcommunity environment of young people. This is the central mission of the Integrated Community Engagement (ICE) Collaborative. Recent evidence in child and adolescent health research suggests that building a strong community around children is the healthiest and most cost-effective way to promote their well-being for the future. However, such a task takes time, effort, and the mutual commitment of key stakeholders in focusing attention on four major domains of the environment surrounding children and adolescents. These major domains are 1) parents and family, 2) the school, 3) friends and peers, and 4) leisure time. All of these are most
powerful in the immediate environment of young people, such as their local neighborhood or community.

Research has shown that children and adolescents who are surrounded by positive environments within the four major domains are much less likely to use or consider using legal or illicit substances and to drop out of school. Furthermore, engaging in behaviors in one of these areas greatly increases the risks associated with the other areas. For example, young people who use illicit drugs are also more likely to drop out of school than those who do not use drugs. Dropping out of school is especially problematic, as the most reliable predictors of adult health throughout the lifespan are educational attainment and socioeconomic status (SES) with SES being largely predicted by educational attainment. As such, interventions that successfully delay the onset of adolescent substance use and encourage students to stay in school, contribute to their health and well-being not only in the present, but also for decades to come.

The ICE Collaborative is a holistic prevention approach rooted in the Icelandic Prevention Model which focuses on strengthening protective factors and reducing risk factors for substance use within school-communities. To that end, this report is organized as a tool to promote the collaboration between all concerned community members in the community surrounding Fayette and Wyoming County High Schools. The main section of the report includes the results from the 2019, 2020, 2021, 2022, and 2023 ICE Surveys for Fayette and Wyoming County High schools and comparative rates between all schools and the county total. The results section includes 54 Figures and 20 Tables and is divided into the following four main sections:

Section 1: Includes Figures and Tables which concern the rates of substance use, access to substances and age of use onset.

Section 2: Includes Figures and Tables that report on the rates of risk and protective factors for substance use within the four domains of parents/caregivers, peer group, school environment, and leisure time, in addition to a brief section on the local community.

Section 3: Shows how rates of selected risk and protective factors for children in the County across the four major domains of parents/caregivers, peer group, school environment, and leisure time, in addition to local community, are related to substance use outcomes.

Section 4: Includes Tables that report the frequencies of children knowing someone who was diagnosed with or died from COVID-19 as well as the impacts of COVID-19 on children and their families.

## Methods

## Participants and procedure

The participants in this study were all accessible and interested students in Fayette and Wyoming County high schools during the fall semester of 2019, 2020, 2021, 2022, and 2023. Participation was open to all students but not required for anyone. Of 394 students enrolled in Midland Trail High School in the fall of 2023, 290 or $73.6 \%$ participated in the study. Compared to school-based surveys generally and the principles of survey research methodology, these response rates are good.

In Fayette and Wyoming County high schools, the ICE Collaborative, and potential participation in the study, was first introduced to parents and caregivers through a note that was sent home with students. Through a passive consent process parents were requested to contact either the County Coordinator for the ICE Collaborative study, or the Principal Investigators, Drs. Kristjansson or Mann by email or office phone to withdraw their children from participation.

A supervising contact agent (SCA) was appointed as the lead on-site person to oversee the data collection using a protocol that was designed and delivered by the ICE Collaborative team at WVU School of Public Health. The data was collected with an online questionnaire in the Qualtrics software and overseen by the SCA and teachers during classroom hours in the fall of 2023. Participation was voluntary, and students were free to answer the survey in whole or in part, to skip any question at will, and to change their mind about participation at any time. The online surveys were carried out inside a computer laboratory in each school and supervised by the SCA and teachers. All aspects of this investigation were reviewed and approved by the West Virginia University Institutional Review Board (protocol \# 1406345394R007).

## Measures

The measures used in the ICE Collaborative survey broadly cover the main outcome area of substance use, as well as the four risk and protective factor domains; parents/caregivers and family, peers and friends, school, and leisure time, in addition to several measures on
community cohesion and trust. Most of the measures used in the surveys originate from national or international surveys such as the annual Youth Risk Behavior Surveillance System (YRBSS) conducted by the Centers for Disease Control and Prevention, the Monitoring the Future survey which is used by the US National Institutes for Health to provide national estimates of substance use among youth, and the European School Survey Project on Alcohol and Drugs (ESPAD) that is conducted every 3-4 years in 35 to 40 countries in Europe. A few measures originate from other sources. In total the ICE Survey questionnaire took students typically less than one full class session to complete.

Note: In the high school reports, all figures and tables include a blinded comparison between all high schools that participate in the project in both Fayette and Wyoming Counties and then a "Total" for both counties combined. In the middle school reports a similar blinded comparison is made available between middle schools within each respective county and the "Total" for that particular county.

## Results

Section 3: Risk and protective factors and relationships to outcomes Parents/Caregivers

Figure 45. Parents/caregivers know whom I am with in the evenings - "Applies very well to me"

## Parents/Caregivers Knowledge of Their Children's Whereabouts by Substance Use Status

Figure 46. Parents/caregivers knowledge of student location in the evenings - "Applies very well to me"

## Peer Group

Best Friend Tobacco Smoking by Substance Use Status

Figure 47. Best friend smokes tobacco on a daily basis by substance use status - "Yes"

## Peer Respect for Alcohol Use by Substance Use Status

Figure 48. The following things are important for me to do in order to gain respect from my peers - Drink Alcohol, by substance use status - "Increases respect a lot" + "Increases respect somewhat"

School

Figure 49. The students at my school are nice to each other by substance use status - "Strongly Agree" + "Somewhat Agree"

School Goal Setting and Achievement by Substance Use Status

Figure 50. My school is helping me achieve goals that matter to me by substance use status - "Strongly Agree" + "Somewhat Agree"

Leisure Time

Figure 51. Students who are outside after midnight by substance use status - Once or more per week

Figure 52. Students who hang out at a friend's home with no adults present by substance use status - Once or more per week

## Community

Figure 53. There is a great deal of social life available in my neighborhood/community by substance use status - "Agree Strongly" + "Somewhat Agree"

Neighborhood/Community Happiness by Substance Use Status

Figure 54. It is good to live in my neighborhood/community by substance use status - "Agree Strongly" + "Somewhat Agree"
