

Integrated Community Engagement (ICE) Collaborative

County Report:
Communities Served by
Midland Trail Middle School
Fall 2023

Fayette County, West Virginia

Confidential

The ICE Collaborative 2019-2024 is funded by the Centers for Disease Control and Prevention via U48 Collaborative Agreement mechanisms to West Virginia Prevention Research Center within West Virginia University School of Public Health. The authors would like to extend our gratitude to the funder for its generous support. The contents of this report are the sole responsibility of Dr. Kristjansson and Dr. Mann, project Principal Investigators.

Important

Thank you to the Fayette School District and its schools for being partners committed to preventing substance use and abuse among young people in Fayette County. We appreciate all they have done to support data collection and to help families and community members learn more about what can be done to reduce risk and protect children and adolescents. Although your local school district and schools are playing a central role in this work, it is important to clearly state that this is not a school report, but a community report. The report's findings describe what families, communities, peers, and schools can do in partnership to help prevent substance use and abuse among young people. Schools alone are not responsible for any problems described in this report and cannot be solely or primarily responsible for providing the solutions. The findings of this report describe what is happening in the whole community and provides opportunities for the whole community to act together. That said, what your local school district and schools have done to help the community better understand how to prevent substance use and abuse among young people has been critically important. We appreciate their leadership and hard work, as well as their ongoing commitment to the project. We encourage all members of the community to join us in expressing gratitude for the essential contributions of your local school district and schools.

Introduction

Preventing child and adolescent substance use and risks associated with school drop-out are critical to promote healthy development. A successful approach to such prevention is to work towards strengthening key protective factors and reducing risk factors that operate in the local-community environment of young people. This is the central mission of the Integrated Community Engagement (ICE) Collaborative. Recent evidence in child and adolescent health research suggests that building a strong community around children is the healthiest and most cost-effective way to promote their well-being for the future. However, such a task takes time, effort, and the mutual commitment of key stakeholders in focusing attention on four major domains of the environment surrounding children and adolescents. These major domains are 1) parents and family, 2) the school, 3) friends and peers, and 4) leisure time. All of these are most

powerful in the immediate environment of young people, such as their local neighborhood or community.

Research has shown that children and adolescents who are surrounded by positive environments within the four major domains are much less likely to use or consider using legal or illicit substances and to drop out of school. Furthermore, engaging in behaviors in one of the areas greatly increases the risks associated with the other areas. For example, young people who use illicit drugs are also more likely to drop out of school than those who do not use drugs. Dropping out of school is especially problematic, as the most reliable predictors of adult health throughout the lifespan are educational attainment and socioeconomic status (SES) with SES being largely predicted by educational attainment. As such, interventions that successfully delay the onset of adolescent substance use and encourage students to stay in school, contribute to their health and well-being not only in the present, but also for decades to come.

The ICE Collaborative is a holistic prevention approach rooted in the Icelandic Prevention Model which focuses on strengthening protective factors and reducing risk factors for substance use within school-communities. To that end, this report is organized as a tool to promote the collaboration between all concerned community members in the community surrounding Fayette County Middle Schools. The main section of the report includes the results from the 2019, 2020, 2021, 2022 and 2023 ICE Surveys for Midland Trail Middle School and comparative rates between all schools and the county total. The results section includes 54 Figures and 20 Tables and is divided into the following four main sections:

Section 1: Includes Figures and Tables which concern the rates of substance use, access to substances and age of use onset.

Section 2: Includes Figures and Tables that report on the rates of risk and protective factors for substance use within the four domains of parents/caregivers, peer group, school environment, and leisure time, in addition to a brief section on the local community.

Section 3: Shows how rates of selected risk and protective factors for children in the County across the four major domains of parents/caregivers, peer group, school environment, and leisure time, in addition to local community, are related to substance use outcomes.

Section 4: Includes Tables that report the frequencies of children knowing someone who was diagnosed with or died from COVID-19 as well as the impacts of COVID-19 on children and their families.

Methods

Participants and procedure

The participants in this study were all accessible and interested students in Fayette County middle schools during the fall semester of 2019, 2020, 2021, 2022 and 2023. Participation was open to all students but not required for anyone. Out of 168 students enrolled in 7th and 8th grades at Midland Trail Middle School in the fall of 2023, 116 or 69% participated in the study. Compared to school-based surveys generally and the principles of survey research methodology, the response rates are good.

In Fayette County middle schools, the ICE Collaborative, and potential participation in the study, was first introduced to parents and caregivers through a letter that was sent home with students. Through a passive consent process parents were requested to contact either the County Coordinator for the ICE Collaborative study, or the Principal Investigators, Drs. Kristjansson or Mann by email or office phone to withdraw their children from participation.

A supervising contact agent (SCA) was appointed as the lead on-site person to oversee the data collection using a protocol that was designed and delivered by the ICE Collaborative team at WVU School of Public Health. The data was collected with an online questionnaire in the Qualtrics software and overseen by the SCA and teachers during classroom hours in the fall of 2023. Participation was voluntary, and students were free to answer the survey in whole or in part, to skip any question at will, and to change their mind about participation at any time. The online surveys were carried out inside a computer laboratory in each school and supervised by the SCA and teachers. All aspects of this investigation were reviewed and approved by the West Virginia University Institutional Review Board (protocol # 1406345394R007).

Measures

The measures used in the ICE Collaborative survey broadly cover the main outcome area of substance use, as well as the four risk and protective factor domains; parents/caregivers and

family, peers and friends, school, and leisure time, in addition to several measures on community cohesion and trust. Most of the measures used in the surveys originate from national or international surveys such as the annual Youth Risk Behavior Surveillance System (YRBSS) conducted by the Centers for Disease Control and Prevention, the Monitoring the Future survey which is used by the US National Institutes for Health to provide national estimates of substance use among youth, and the European School Survey Project on Alcohol and Drugs (ESPAD) that is conducted every 3-4 years in 35 to 40 countries in Europe. A few measures originate from other sources. In total the ICE Survey questionnaire took students typically less than one full class session to complete.

Results

Section 1: ICE outcomes by category

Figure 1. Frequency of students who have ever tried cigarette smoking

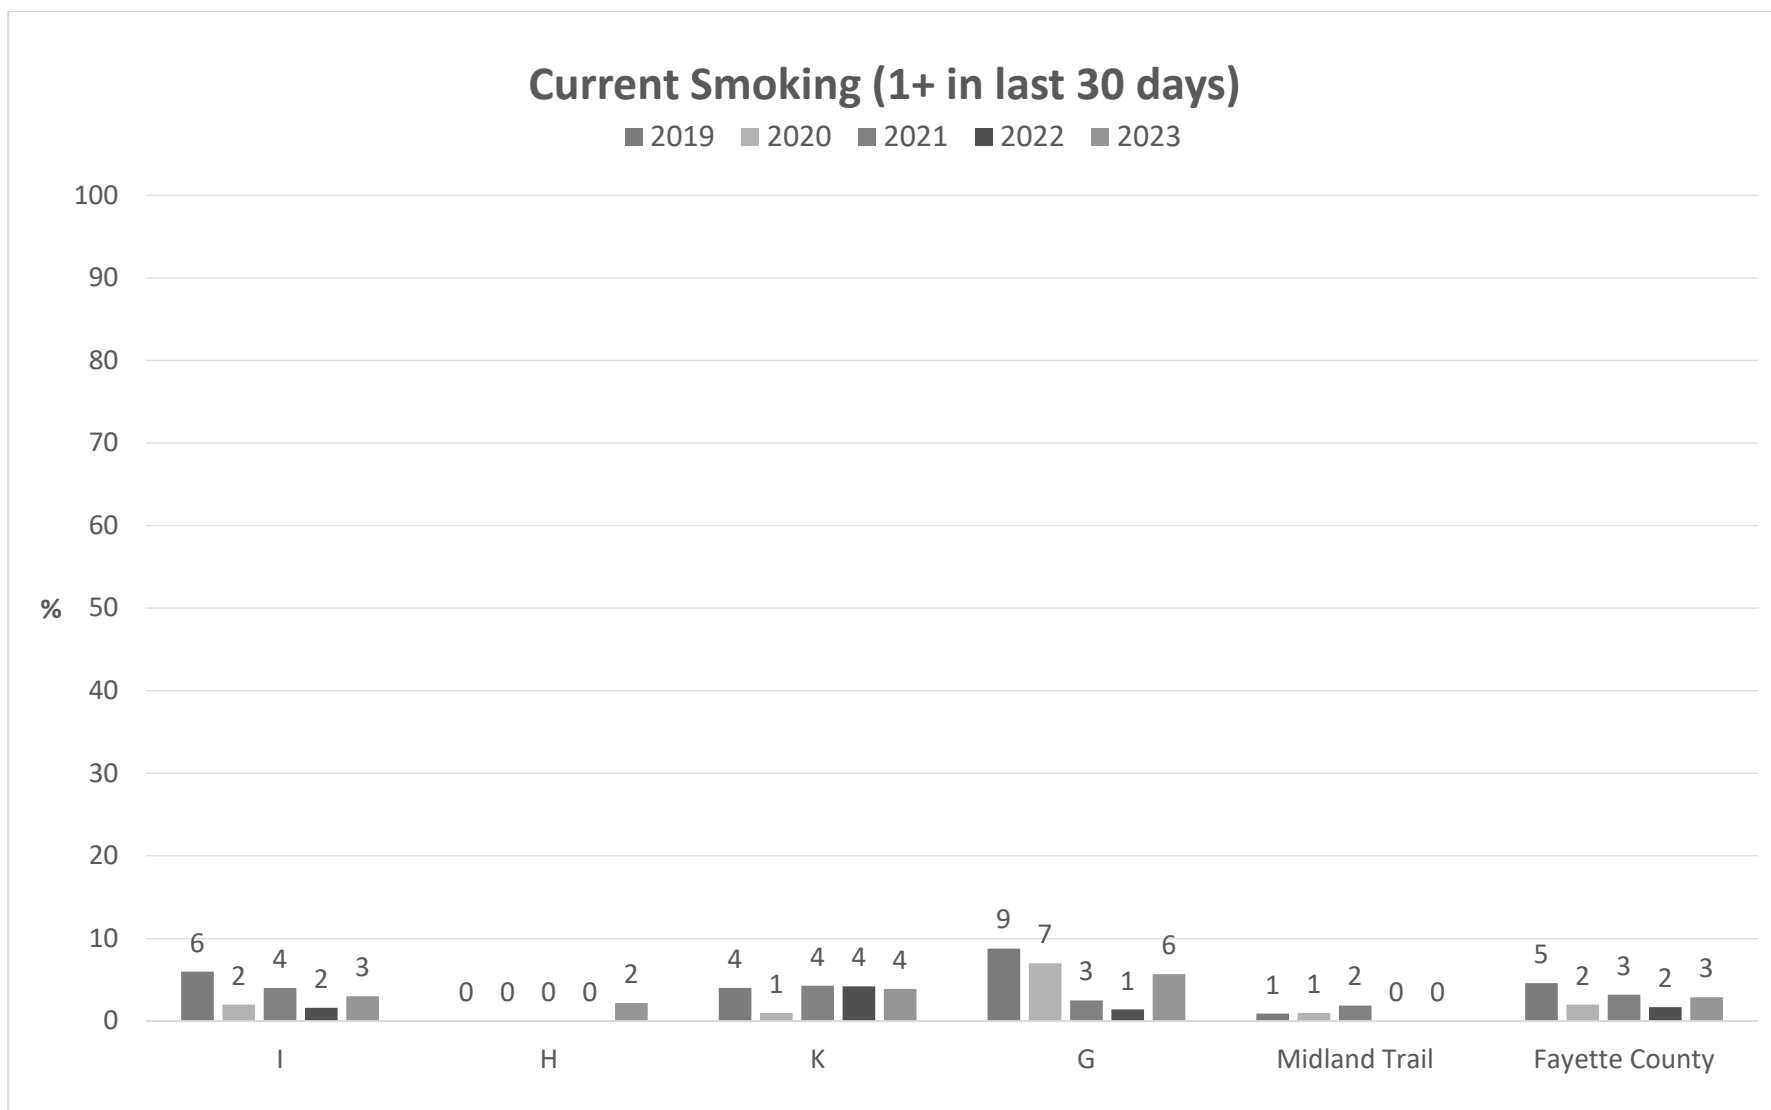

Figure 2. Frequency of students who currently smoke cigarettes

Figure 3. Frequency of students who smoked cigarettes daily during the last 30 days

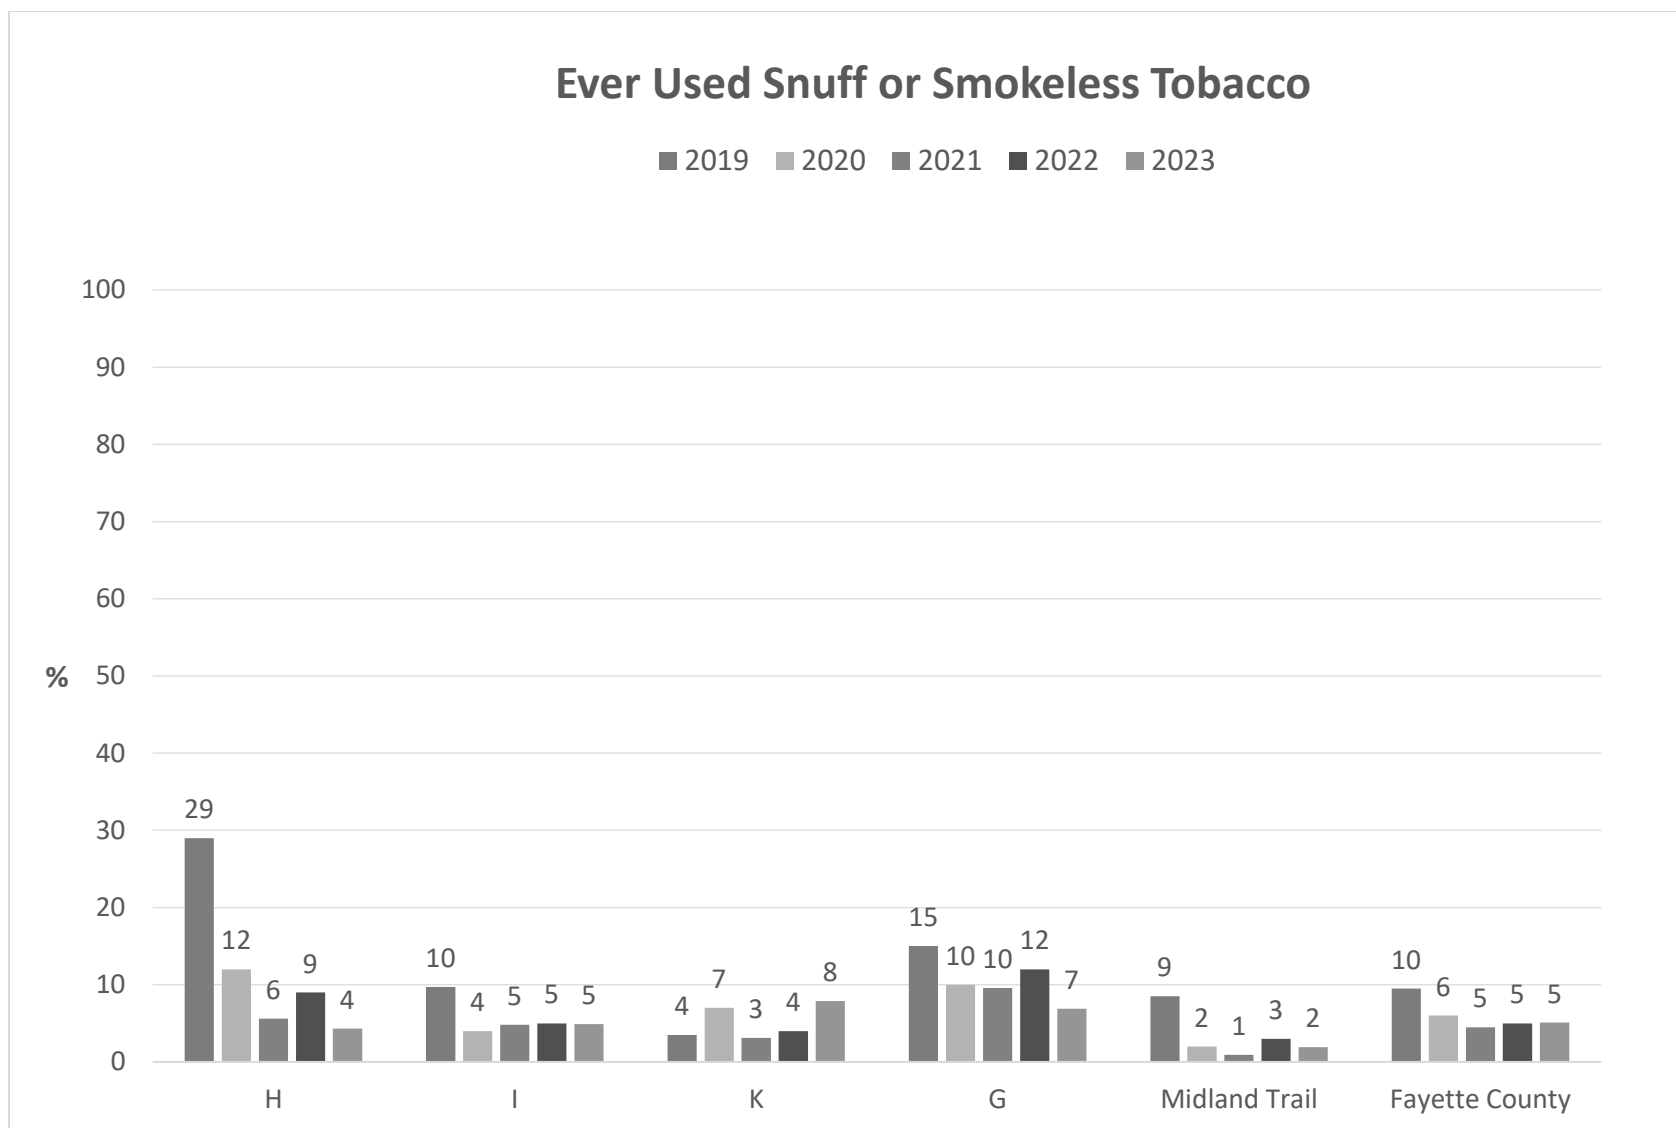

Figure 4. Frequency of students who have ever used snuff, chewing tobacco, or other tobacco inserted in mouth

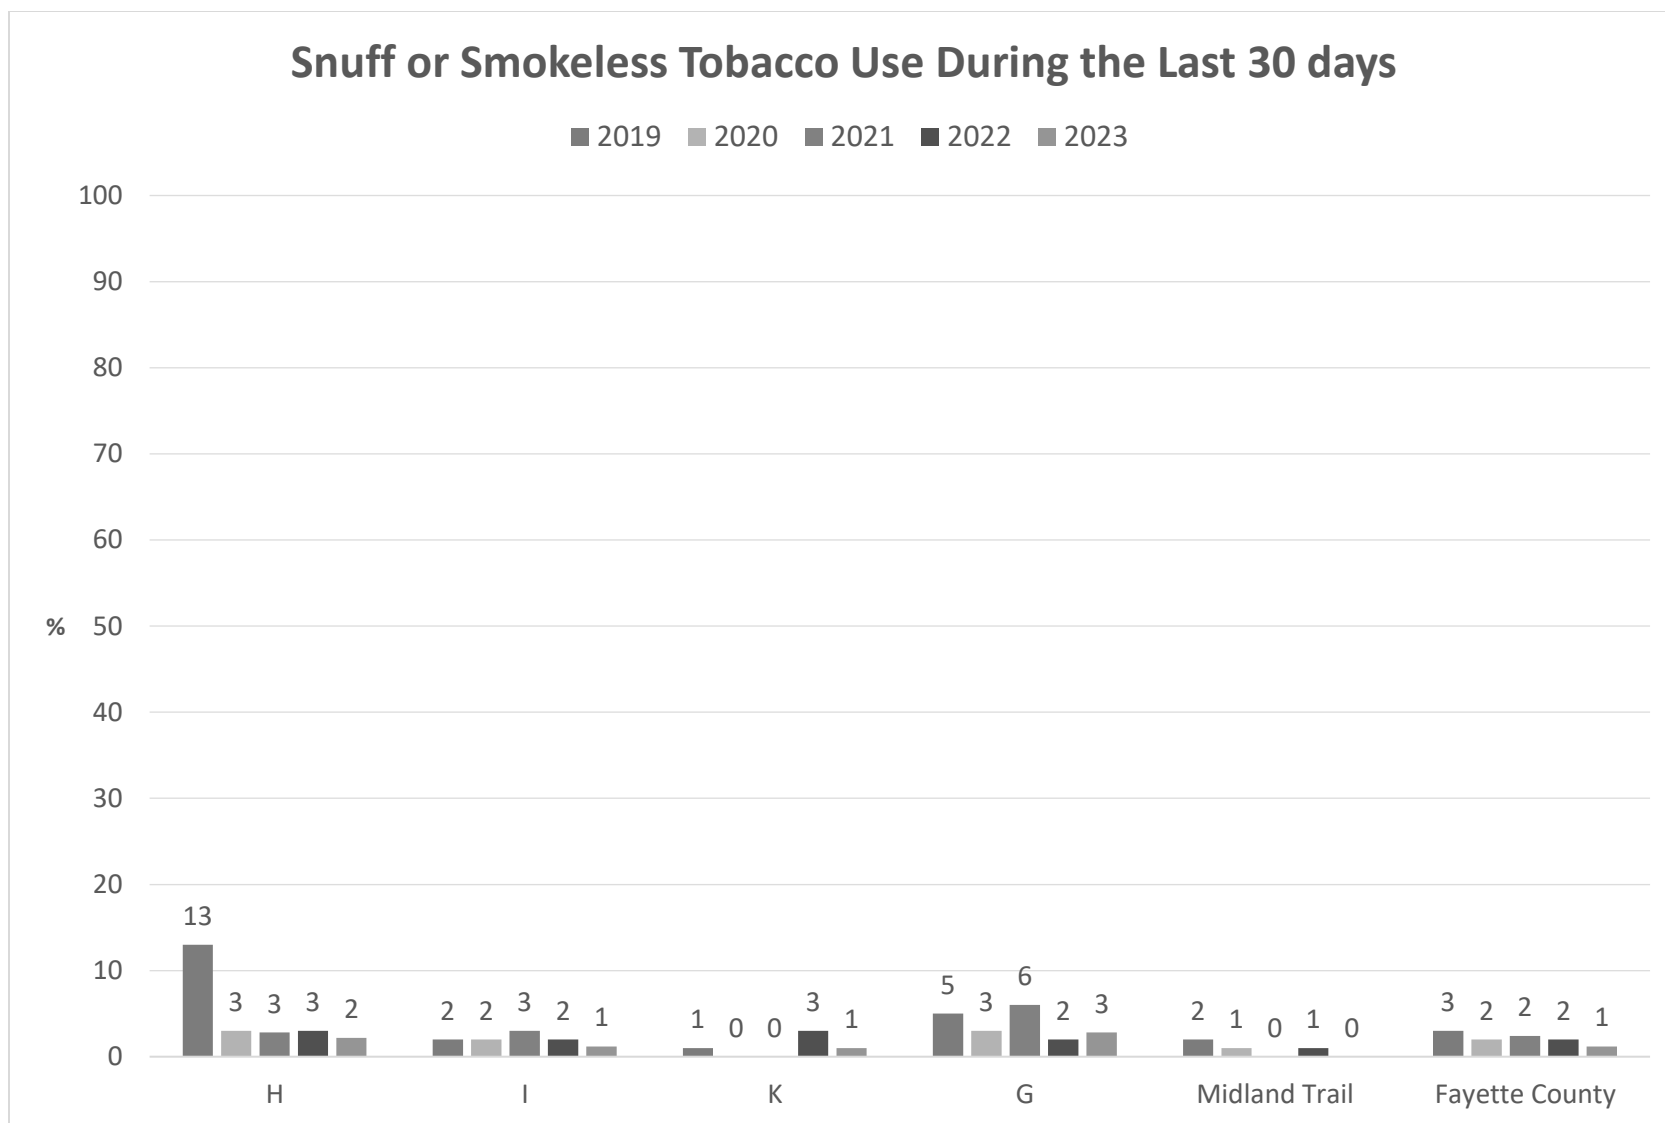

Figure 5. Frequency of students who used snuff, chewing tobacco, or other tobacco inserted in mouth in the last 30 days

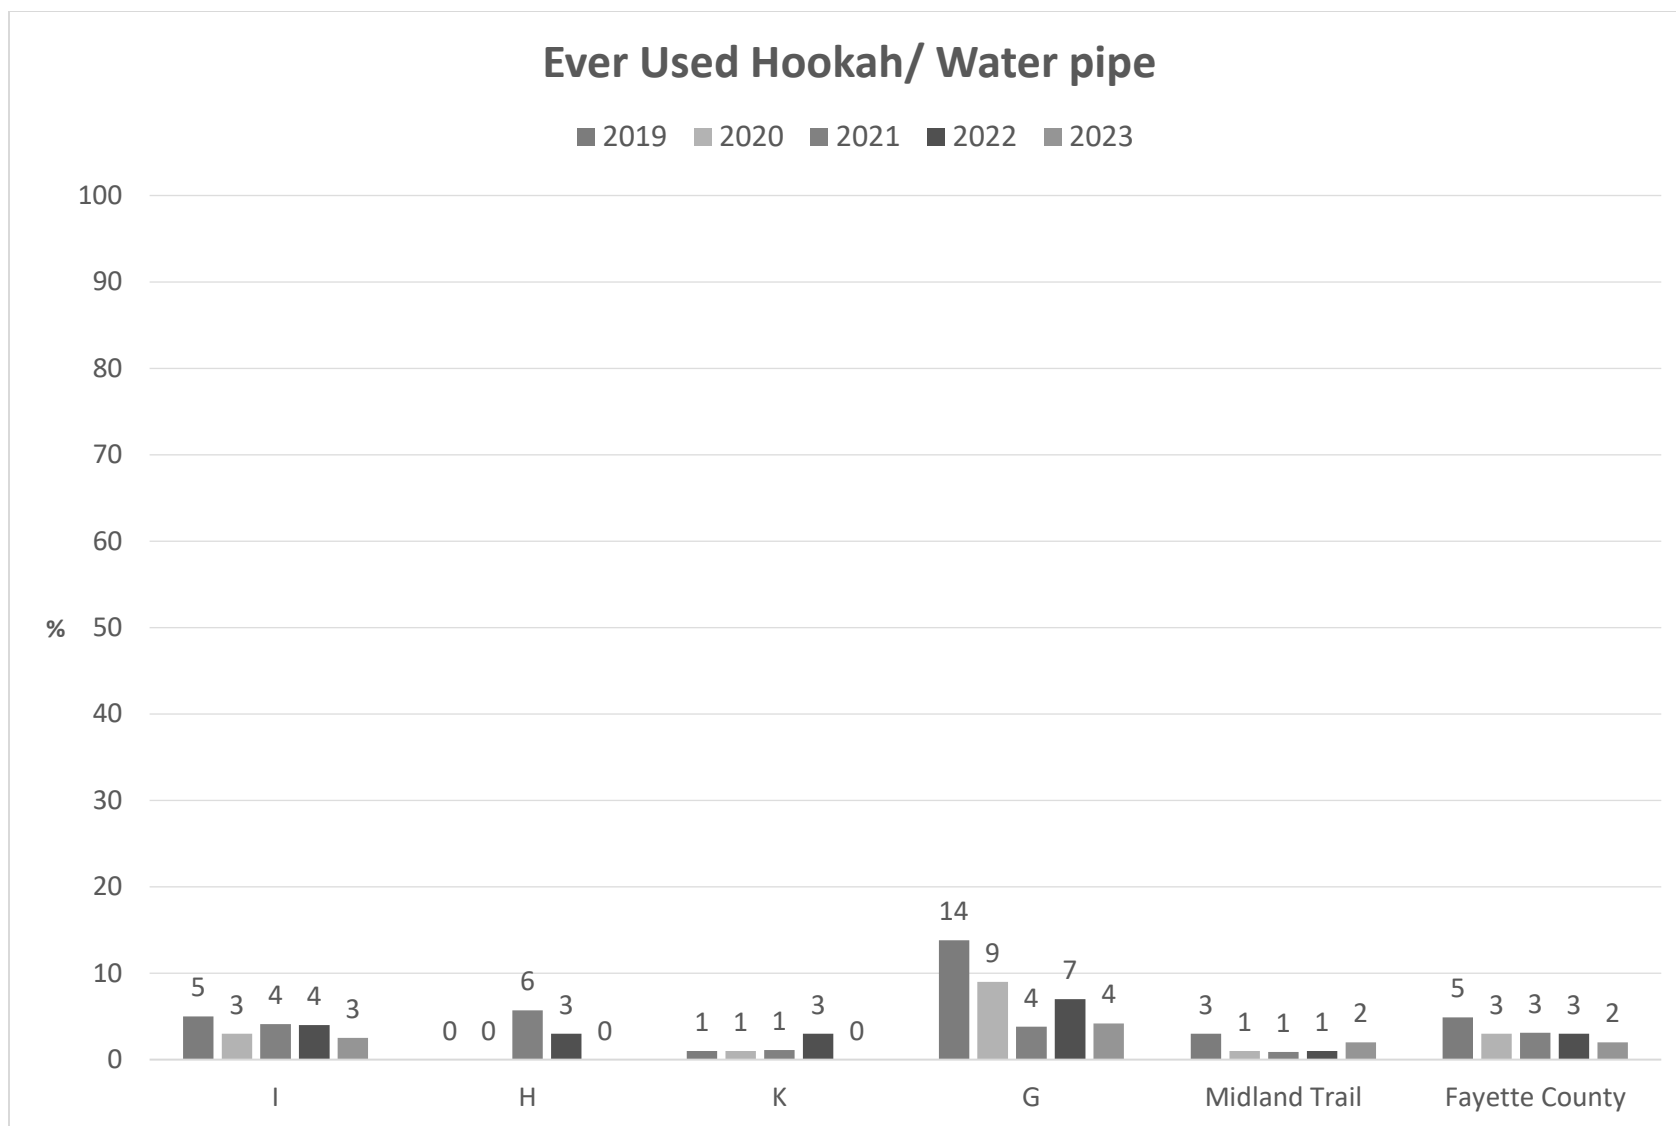

Figure 6. Frequency of students who have ever used a hookah or water pipe

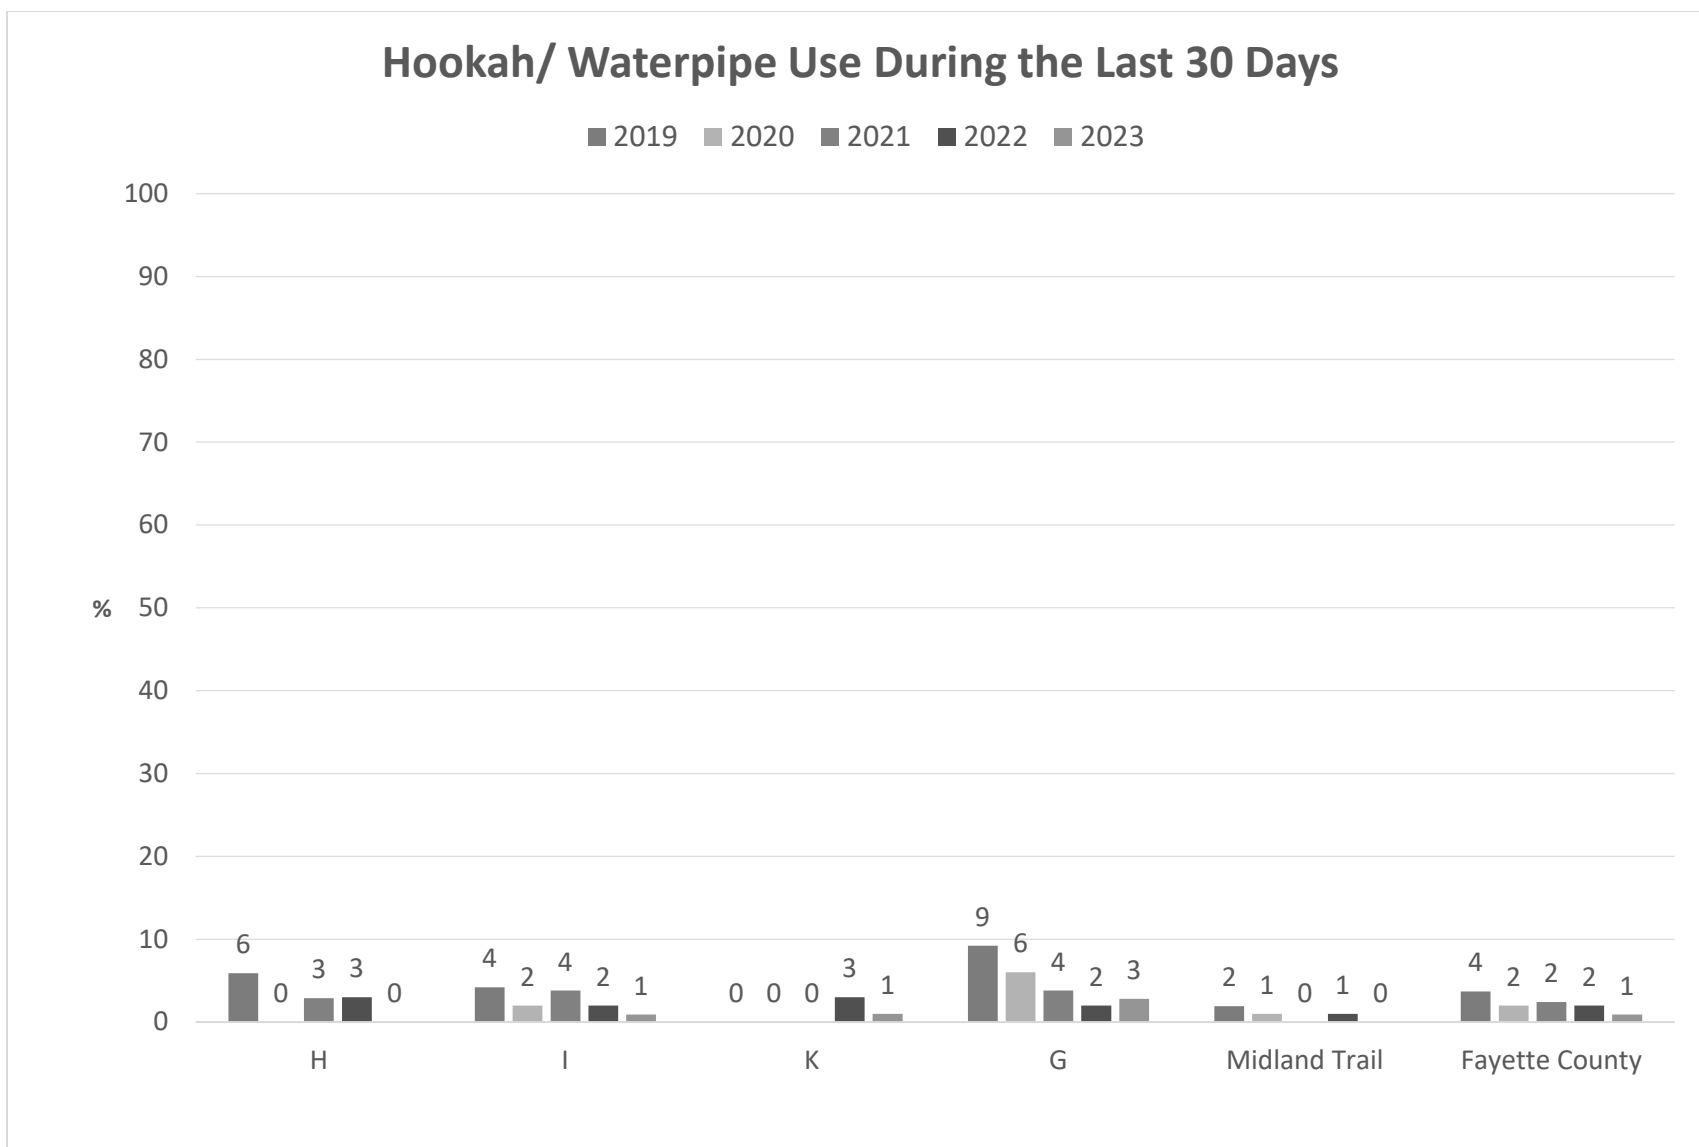

Figure 7. Frequency of students who used a hookah or waterpipe in the past 30 days

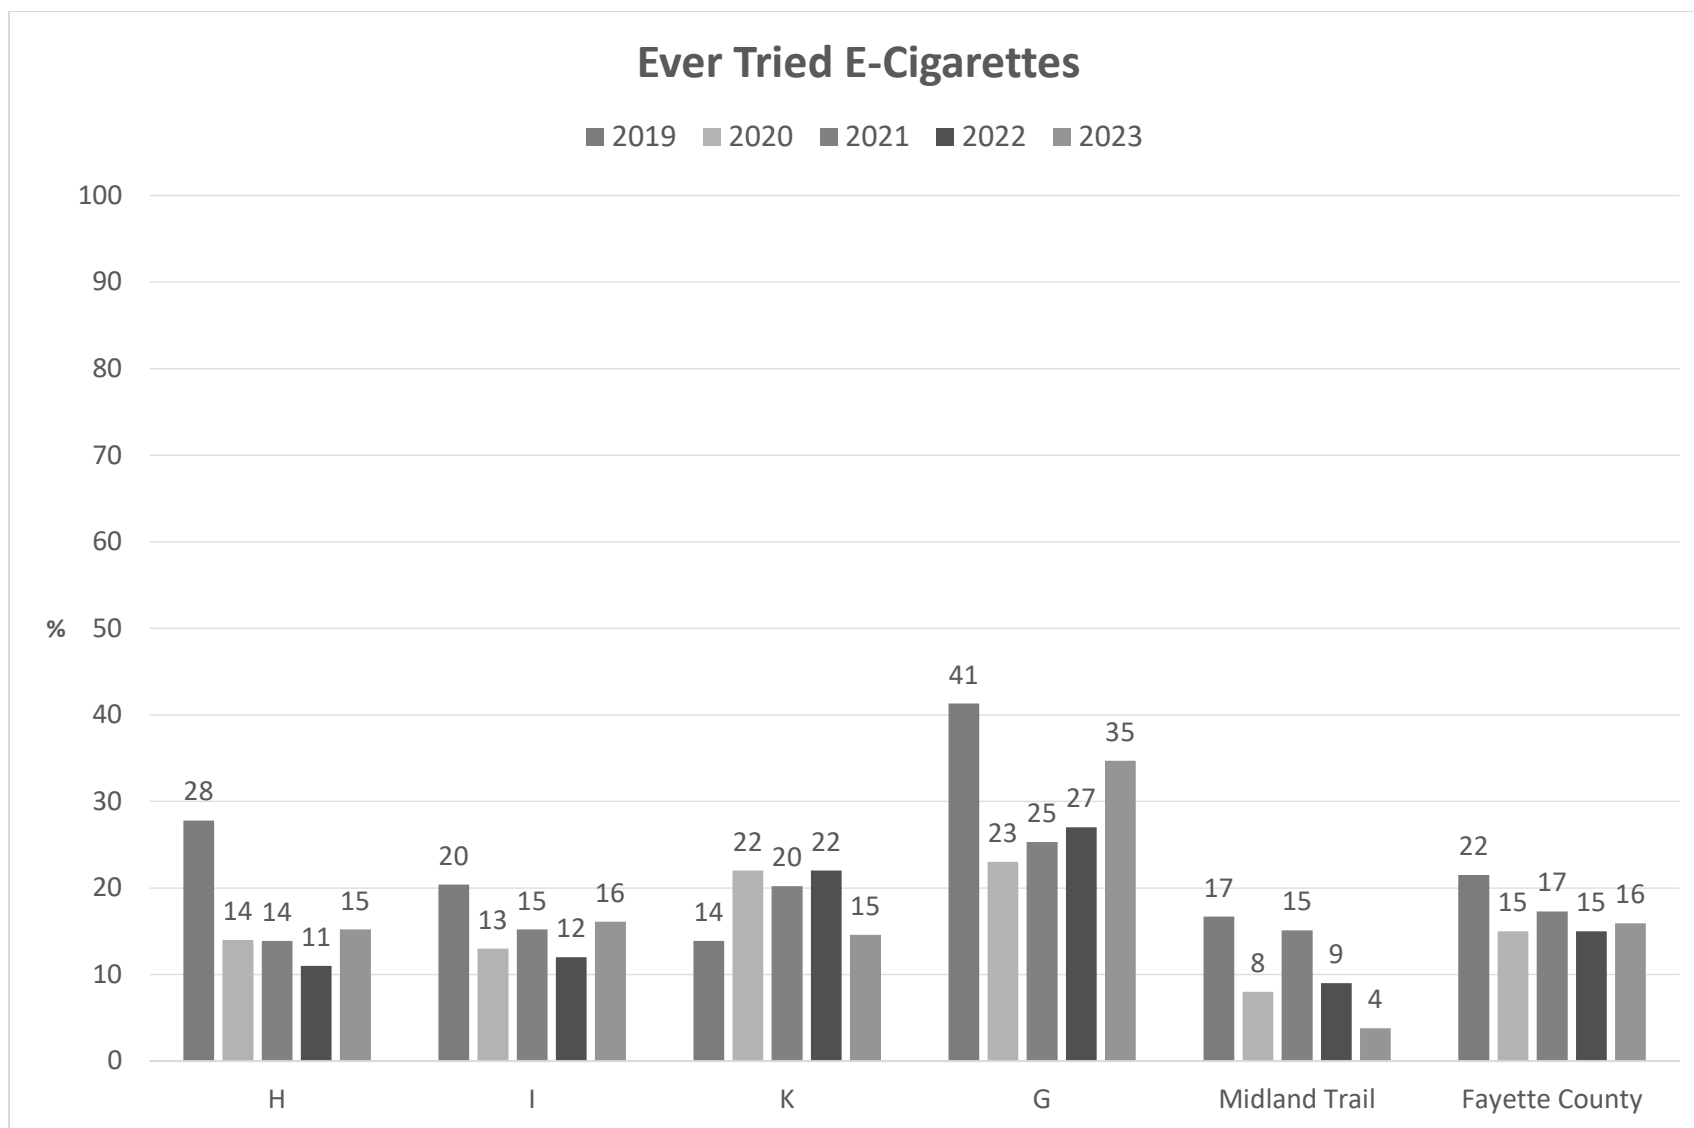

Figure 8. Frequency of students who have ever tried e-cigarettes

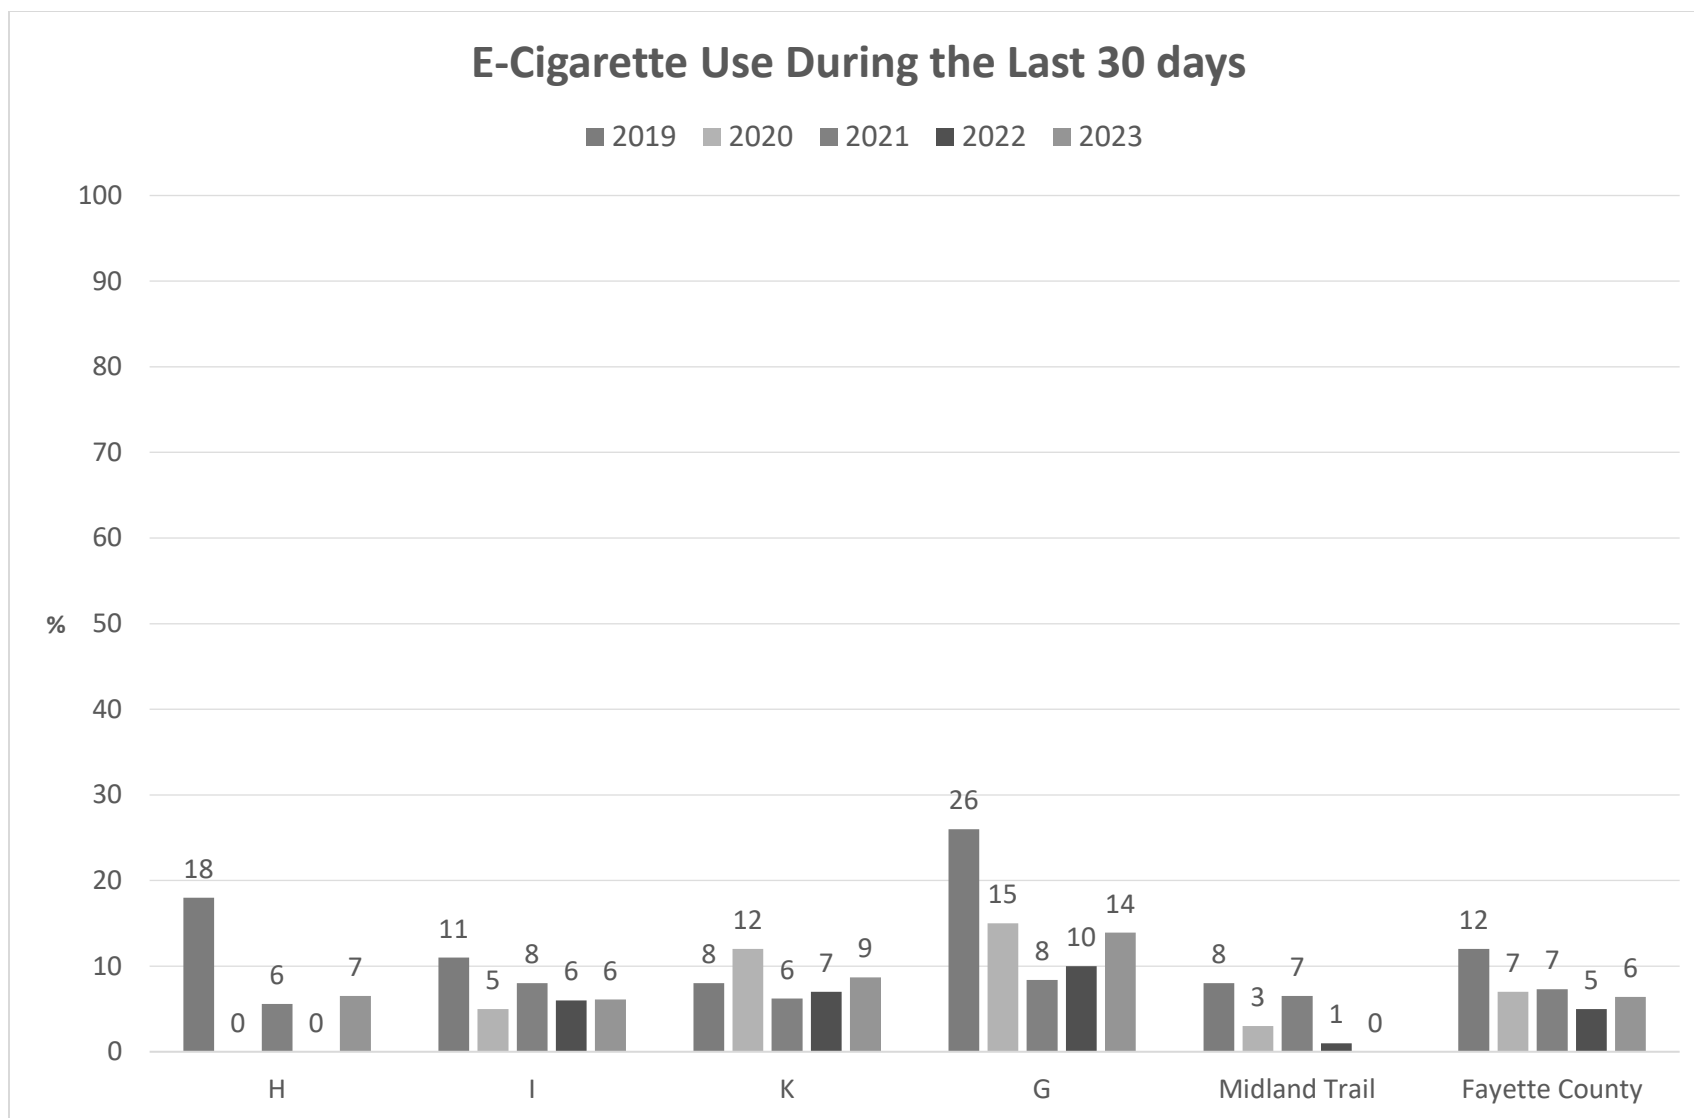

Figure 9. Frequency of students who have used e-cigarettes in the last 30 days

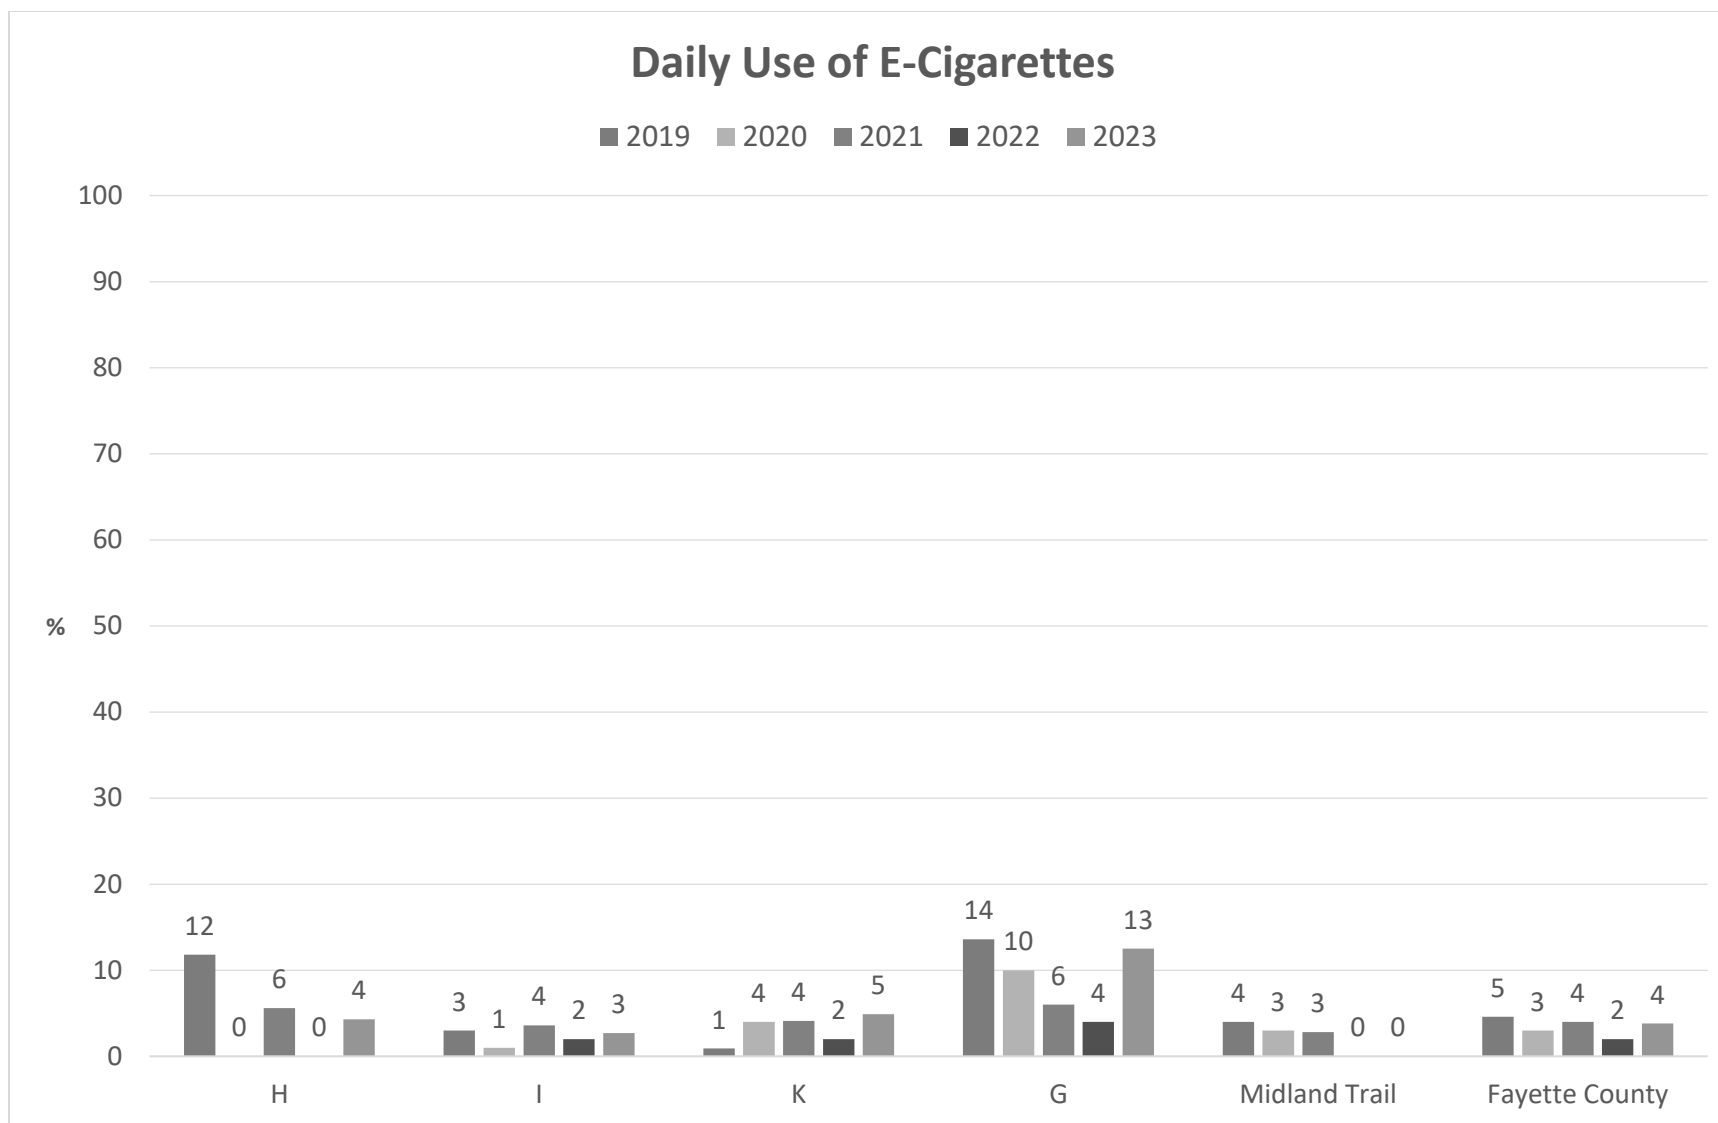

Figure 10. Frequency of students who used e-cigarettes daily

Section 3. Risk and Protective Factors and Relationships to Outcomes
Parents/Caregivers

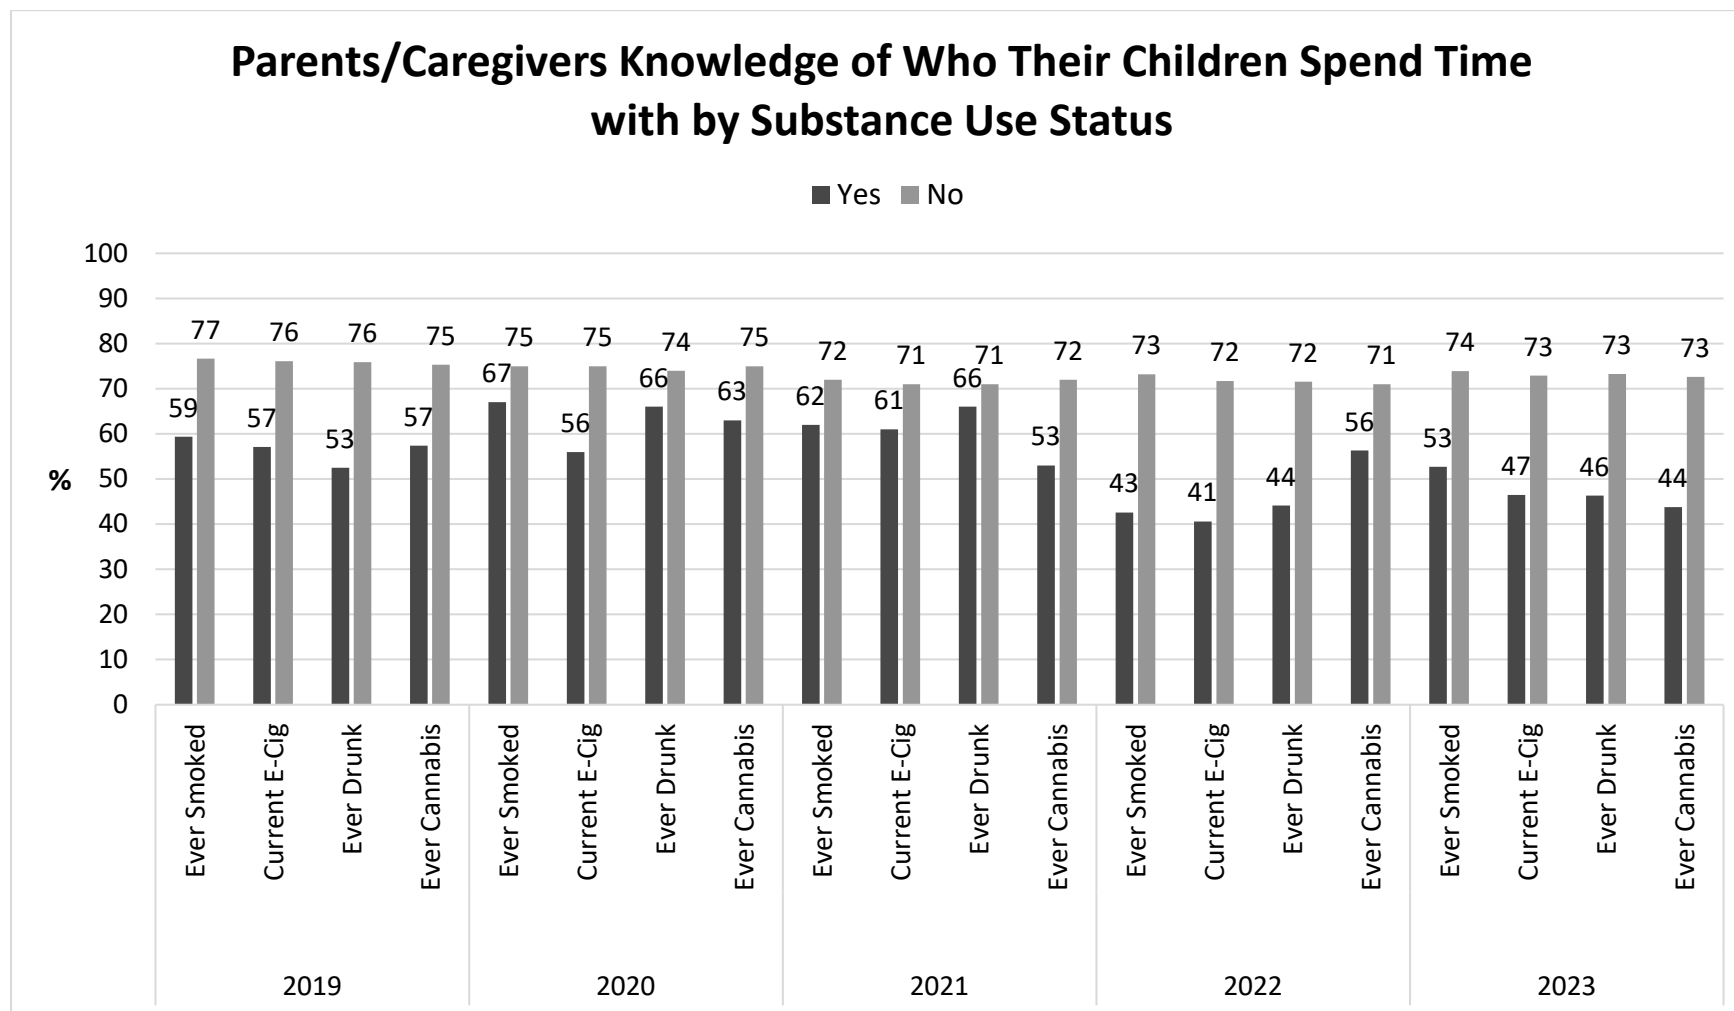

Figure 45. Parents/caregivers know whom I am with in the evenings – “Applies very well to me”

Figure 46. Parents/caregivers knowledge of student location in the evenings – “Applies very well to me”

Peer Group

Figure 47. Best friend smokes tobacco on a daily basis by substance use status – “Yes”

Figure 48. The following things are important for me to do in order to gain respect from my peers – Drink Alcohol, by substance use status - “Increases respect a lot” + “Increases respect somewhat”

School

Figure 49. The students at my school are nice to each other by substance use status – “Strongly Agree” + “Somewhat Agree”

Figure 50. My school is helping me achieve goals that matter to me by substance use status – “Strongly Agree” + “Somewhat Agree”

Leisure Time

Figure 51. Students who are outside after midnight by substance use status – Once or more per week

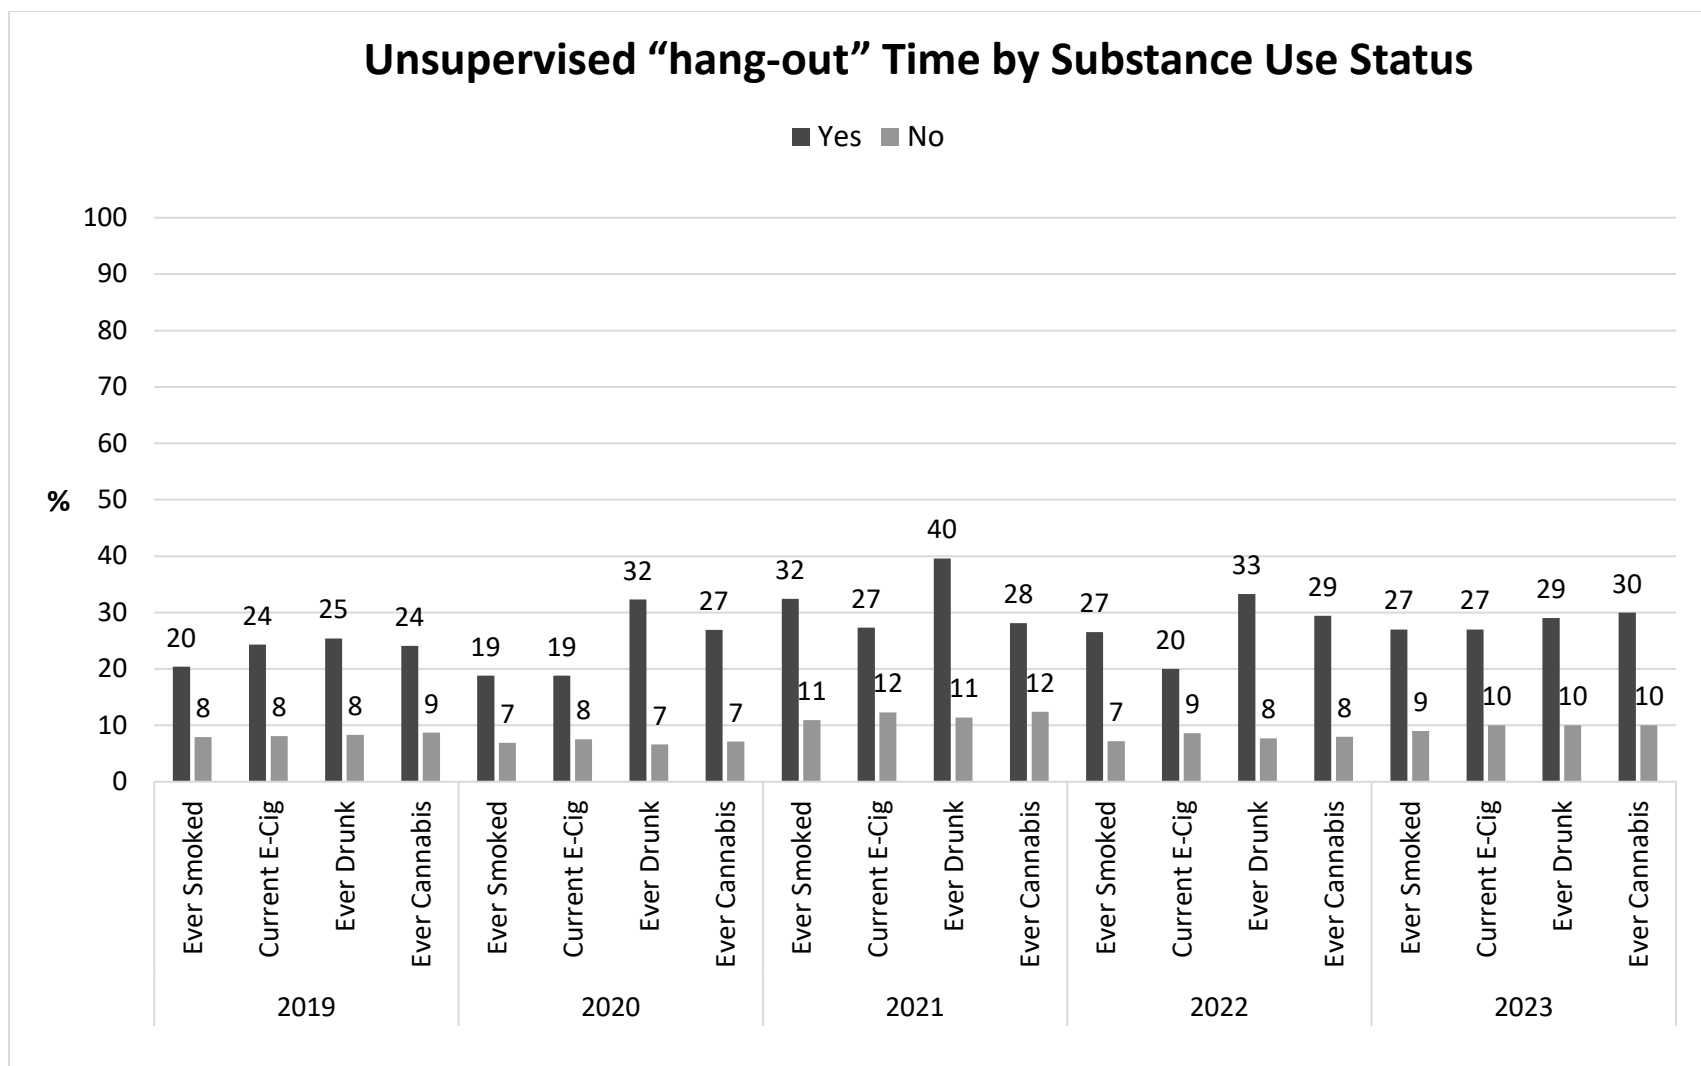

Figure 52. Students who hang out at a friend’s home with no adults present by substance use status – Once or more per week

Community

Figure 53. There is a great deal of social life available in my neighborhood/community by substance use status – “Agree Strongly” + “Somewhat Agree”

Figure 54. It is good to live in my neighborhood/community by substance use status – “Agree Strongly” + “Somewhat Agree”

Section 4. Impact of COVID-19

Table 17. Frequency of students who personally knew anyone who has been sick with COVID-19 by school.

| | Me | Parent/Caregiver | Another Family Member | Friend | Someone Else |
|---------------------------|-------------|------------------|-----------------------|-------------|--------------|
| I (%) | | | | | |
